Abstract

Education is the process of facilitating learning, or the acquisition of knowledge skills, values, morals beliefs and habits. Education has been considered as a factor vital to national progress .Ensuring quality higher education requires quality publications .

Key words:-Higher education, quality education, publication and social

What is quality in higher education?

It would probably not be hard to get a consensus around the proposition that universities should aim for high quality in both their teaching and their research. But it is much harder to identify what quality actually is, how it can be recognised and how it can be measured. This is illustrated by the fact that some of the key policy documents on quality assurance for universities go into great detail about the process by which quality should be assured without ever once saying what actually constitutes 'quality'.

higher education sector is pivotal in delivering training to people at all stages of their careers, from students and recent graduates to senior managers. Accreditation at every level gives assurance to employers and allows employees to have concrete evidence of their career development. This, in turn, reduces staff turnover and improves job satisfaction leading to higher morale in the workplace. Plus, skills training has an immensely positive impact on the wider economy. A well-trained, highly-skilled workforce is better prepared for the challenges and opportunities of the modern workplace. Staff with the right expertise work more efficiently and confidently than those struggling to keep up with the changing demands of their roles. Ultimately, a skilled workforce increases productivity, boosts output, and propels growth in the wider economy.

throughout history, universities have brought a lot of benefits to the individuals who had the privilege of attending them, as well as the society in general. In the 21st century, as new discoveries keep appearing coupled with constant technological innovation, higher education has never been more beneficial to the individual and the society of a country in general alike. Namely, the increasing rate of individuals with higher education diplomas appears to be among the crucial factors in the advancement of the global economy and the improvement of the people's quality of life.

Academic quality is a way of describing how well the learning opportunities available to students help them to achieve their award. It is about making sure that appropriate and effective teaching, support, assessment and learning opportunities are provided for them. Personal development

From the first day of studies, young people face a great number of assignments, discussions and courses with deadlines. Therefore, in the process of fulfilling their educational obligations, the students gain a wide range of skills that contribute to their comprehensive personal development.

- **You become more productive** – Whether they want it or not, students don't have much choice when it comes to

delaying their obligations. Namely, due to very tight deadlines, students simply learn how to make the appointed time fit their schedule.

- **Identifying new skills** – Students often think that they have discovered all important skills in high school and that the only thing they can do is increase the knowledge in the field in which they have decided to study. However, practice has shown that, due to the wide range of topics and content the students often encounter, they find their horizons expanding when it comes to new opportunities and possibilities, which often results in the acquisition of new skills.
- **Acquiring better communication skills** – During their studies, students are often obliged to work in groups, participate in group discussions and present their arguments in front of their fellow students, which makes it easier to transfer their knowledge and information to others later on.
- **Improves your self-esteem and self-confidence** – For many students, acquiring a college degree represents a great achievement, especially if they come from a low-income household or they are the first in their family to get a shot at higher education. The very act of receiving a diploma, along with the experience gained in college, gives students a sense of self-realization and dignity that no one can take away.

Economic Growth

When an entire society is educated, productivity increases, average income increases, and unemployment decreases. This leads to the economic growth and stability of a society as a whole. It starts with education.

Environmental benefits

In the last decade, climate problems have become one of the main topics faced by every country. Research has shown that individuals with academic degrees have more awareness and knowledge about climate change. This knowledge can easily be directed towards the advancement of the methods and regulations concerning sustainability in companies where they work, as well as in society in general.

Promotes good citizenship and reduces crime

Every educational institution aims to produce good, constructive citizens who will know how to abide by the law. People with higher education pay higher taxes (which, in turn, increases the resources the country can reallocate to the areas where they are needed the most) and pay health insurance, as well as social insurance (which means lower probability of bankruptcy and homelessness).

If we look at the research on people on the wrong side of the law, we can see that the probability of incarceration is 5 times

lower for persons with any level of academic degree. It should also be noted that as much as 68% of prisoners did not finish high school.

Equality and empowerment

Education in general, and especially higher education, empowers women and men from ethnic minorities that underwent years of social stigmatization. Acquiring an academic degree decreases the level of gender discrimination, as well as the level of violence against women. This is a very important benefit for women, as it empowers them to be independent and take responsibility for their own life into their own hands.

Conclusion

Capacity building with career and character confirms quality education and solemnly depends on quality publication including e-learning materials. Quality assurance require active concerns of apex government agencies. Role of teachers and the university continues to be important in the field of education –industries and the business of information exchange .
